# EVVA DPS: Double profile high security key system

Why you need to install a High security key system and not just a registered pin tumbler system?

A high security key system provides features that increase its security against illegal attacks. These features prevent illegal key duplication; they provide security against physical attacks and entry methods such as drilling, lock manipulation or lock bumping.

## *Why EVVA DPS is the Key System for you!*

- » Patent protection till 2022.
- » Anti-Pick and Anti-Bump security features.
- » All cylinders are Drill resistant.
- » Multi-profile sidebars to maximise codes.
- » Super tough nickel silver keys.
- » Coloured key identification.
- » Teflon impregnated components for continued high performance.

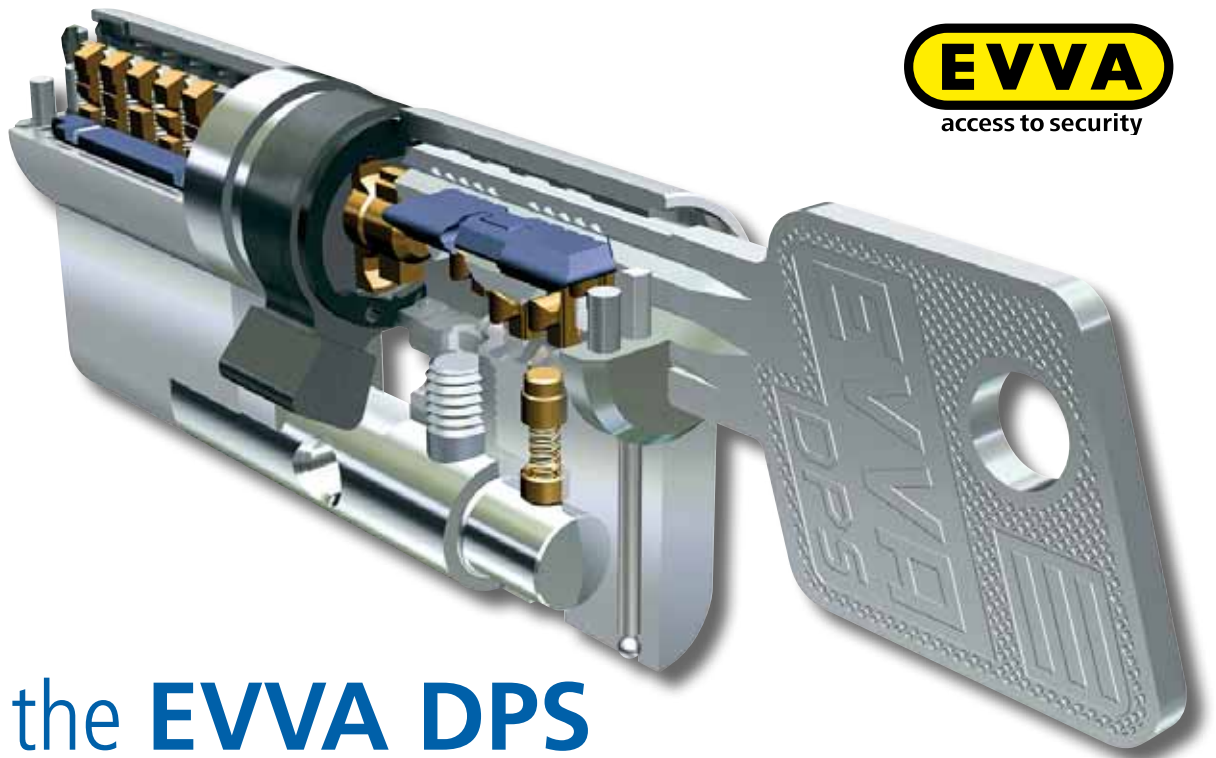

EVVA DPS is a High Security, patented, mechanical Key system. We manufacture cylinders to suit various lock types including:

- Oval cylinders to suit Lockwood, Kaba, Gainsborough, Legge and Astra mortice locks
- Rim and internal cylinders to suit Lockwood and other brand deadlocks and deadlatches
- Fixed and floating cam profile cylinders
- Lockset cylinders for Schlage, Carbine and Lockwood locksets
- Cylinders to suit cupboard locks, T & L handles
- Cylinders Padlocks, Pushlocks & Camlocks
- And cylinders for keyswitches and Rollerdoor locks.

**The unique, patented pinning system and sidebar system make EVVA DPS an extremely high-security system.**

*Importantly, EVVA DPS is ONLY available through locksmiths  
and installed by fully qualified technicians.*

## How the **EVVA DPS** Key System works

The EVVA DPS system features a unique pinning system using sliders to activate a control bar with no traditional top pins. In addition, broaching sidebars are used to create multi broached key systems allowing locksmiths to easily install the largest of key systems possible.

EVVA DPS has high security anti-pick, anti-bump sliders made from Teflon coated nickel silver, which are protected by hardened sidebar blocking pins and a key control hook pin. In the front of the cylinder we have hardened steel pins to protect the cylinder against drilling.

- The key has a number of side cuts. Each cylinder contains a key sidebar with matching cuts
- When the key is inserted, the key broach sidebar lines up with the correct sidebar cuts in the key allowing key rotation
- There is a key control bar located in each cylinder along with six sliders ranging in depths from 1 to 9. Insertion of a key with correct cuts aligns the six sliders with the control bar allowing key rotation

*DPS-longitudinal profile for high security of the key*

# A Perfect Combination with Electronic Access Control Systems

## Master key systems tailor made for your needs.

For economic and security reasons, mechanical locking systems are often installed in conjunction with an electronic locking system. This allows a building entrance to be electronically monitored whilst the interior doors are organised and secured via a mechanical master key system.

## Emergency entry cylinders for Electronic Locking Systems

Nothing can replace the reliability of a Mechanical Key System. For this reason Mechanical override cylinders are always needed in case of an emergency (eg: a Fire or power outage) this is recommended as a basic requirement and is often compulsory as part of occupational health and safety.

## Australian Government SCEC Approved

EVVA DPS has been SCEC approved for Intruder Resistant Areas when installed into a SCEC endorsed lock or padlock

## Quality Guaranteed

- All EVVA cylinders have been cycle tested to 100,000 uses.
- EVVA cylinders will operate in the most extreme of environments of between -20°C to 80°C. They meet the highest standard levels for corrosion and fire resistance.
- EVVA DPS cylinders meet the European standards for cylinders EN1303:2005.
- EVVA Quality Control is second to none. One in every one hundred cylinders manufactured is quality control checked insuring 100% accuracy in all of our components.
- We continually invest in the latest manufacturing technologies and operate as an environmentally friendly manufacturer.
- EVVA is manufactured exclusively at our plant in Vienna, Austria.

The EVVA key is manufactured with laminated nickel silver ensuring its strength & longevity.

You have the option of using any of the twelve different coloured key inserts for greater key control

EVVA is compatible with all current key control management software

# Applications for the **EVVA DPS Key System**

## Councils

EVVA DPS has been installed in some of Australia's largest Councils.

## Schools

EVVA DPS has been chosen as preferred Key System for many schools due to its strength and reliability.

## Hospitals

Some of Australia's largest hospitals have chosen EVVA DPS as their preferred High Security Keying System.

## Airports

Security at any airport is paramount. The EVVA DPS Keying System ensures complete security.
